

Energy Conservation

Energy conservation continues beyond the Eco-Cabin.

- **Lighting Replacements**

All of the incandescent bulbs have been replaced with either a CFL or LED model, both of which use a fraction of the electricity to provide the same amount of light. Motion sensor timers have been installed in all of the bathroom complexes, as well as in the dining hall and maintenance yard.

- **Energy Smart Meters**

Camp even monitors energy consumption in real time! This advanced system has helped identify where energy is being used and the peak times for energy consumption. It sends an alert when the energy has reached a certain threshold. Students in the Energy Merit Badge class use the interactive models on the energy website to view usage over the year, month, day, or even second!
